---

## Education:

**Bachelor of Science in Electronics Engineering** | Rizal Technological University | 2019-2025 | PH

---

## Objective:

Seeking junior roles in ECE, IT, Cybersecurity, DevOps, Software Development, to apply hands-on technical skills and grow within a dynamic technology-driven environment.

## Professional Summary:

Electronics Engineering graduate specializing in telecommunications and networking, with hands-on experience in IT operations, network monitoring, and technical support. Trained in cybersecurity fundamentals, Linux and Windows systems, scripting, and security tools through certifications, labs, and personal projects. Experienced in customer-facing technical support, incident handling, and troubleshooting in NOC environments. Highly adaptable, analytical, and eager to grow in IT, cybersecurity, cloud, or engineering-focused roles.

---

## Experience:

### Network Operations Center Analyst Intern

**Radius Telecoms, Inc.** | July 2024 – Sept 2024

- Provided first-line technical support and customer assistance through calls and ticketing systems using Salesforce
  - Monitored network performance and connectivity issues using SolarWinds, identifying outages and performance degradation
  - Assisted in network topology and architecture documentation for planned and existing connections
  - Performed basic network troubleshooting, fault isolation, and issue validation
  - Used PuTTY (Telnet/SSH) for device access and diagnostics
  - Maintained and updated client records and technical documentation
  - Coordinated with and dispatched field engineers for escalated incidents
  - Gained exposure to real-world NOC workflows, escalation procedures, and SLA-driven environments
- 

## Projects:

### Virtual Home Lab (Cybersecurity & IT)

- Built a multi-VM lab to practice Linux/Windows administration, networking, security tools, and troubleshooting scenarios.

### Login Analyzer & Suspicious Activity Detector

- Developed a Python-based tool to analyze login data and detect suspicious patterns using SQL and Bash automation.

### Automated Linux Antivirus System

- Implemented scheduled antivirus scanning and reporting using Bash scripting in GUI and non-GUI environments.

### Password Generator & Manager

- Created a script to generate strong passwords and store credentials securely in structured files

## Technical Skills:

### Cybersecurity & Networking:

- Wireshark, Splunk, Suricata, IDS/IPS, EDR, OpenVAS, Metasploit, Firewalls, VPNs, SIEM basics, TCP/IP, OSI, LAN/VLAN

### Operating Systems:

- Linux/UNIX, Windows

### Programming & Scripting:

- Python, JavaScript, Bash, SQL, C, Rust, HTML/CSS, Git

### Tools & Platforms:

- SolarWinds, Solar PuTTY (SSH/Telnet), Cisco Packet Tracer, Salesforce, GitHub, VS Code, Vim

### Engineering:

- Electronic Soldering, Schematic diagram comprehension
- 

## Soft Skills:

- Customer & Ticketing Support
  - Analytical & Problem-Solving Mindset
  - Incident Response Under Pressure
  - Clear Communication (English, Filipino)
  - Attention to Detail
  - Team Collaboration
  - Time Management
  - Ethical Responsibility & Confidentiality
  - Continuous Learner
- 

## Certifications:

- |   |               |
|---|---------------|
| • <b>Google Cybersecurity Certificate</b>                       | Coursera 2025 |
| • <b>IBM Ethical hacking with Open Source Tools Certificate</b> | Coursera 2025 |

## Trainings:

- Currently studying for CCNA certification
- Completed CS50 free online course
